SUMMARY

Full-stack software engineer with 4 years of experience delivering enterprise web applications across the software development lifecycle. Proven track record developing frontend and backend solutions with React, Angular, Python, Node.js, and SQL, while contributing to 300+ engineering tickets across multiple enterprise SaaS platforms. Known for mastering new technologies, building maintainable software, and collaborating across Engineering, QA, Product, and Client Services teams.

EXPERIENCE

Software Engineer

Colibri Group

August 2022 - Present, Remote

- Built full-stack features across enterprise SaaS applications, developing REST API services and interactive dashboards using Angular, React, C#/ASP.NET Core, Python, Go, Flask, SQL, and Docker, with reusable platform components supporting multiple applications.
- Led SSO onboarding for new enterprise clients, coordinating directly with client stakeholders to gather integration requirements, configure Keycloak settings and identity-provider mappings, troubleshoot authentication issues, and enhance a custom Keycloak SPI with configurable attribute mapping and automated testing to streamline secure SSO integrations.
- Designed and implemented a custom Java Keycloak SPI supporting RFC 7591 Dynamic Client Registration, enabling secure database access through AI-powered chat applications via Model Context Protocol (MCP) integrations using JWT-based authentication and configurable API key access.
- Architected platform capabilities for secure authentication, data exports, and application performance, including OAuth 2.1/OIDC/JWT and API key authentication, generalized export services, and performance optimizations that improved maintainability across multiple applications.
- Modernized 4 production Flask applications by upgrading framework versions and 15+ dependencies, authoring migration guides, and resolving production issues while maintaining uninterrupted service.
- Delivered reporting platforms, PDF/Excel export workflows, organizational hierarchy features, and cross-service integrations that improved reporting accuracy, administrative workflows, and data integrity; authored 20+ technical documents, participated in technical demos, and resolved 300+ engineering tickets.

Hydropower Water Resources Engineer

CA Department of Water Resources

January 2021 - July 2022, Sacramento, CA

- Refactored and optimized Python and R-based hydropower simulation models, improving model accuracy and increasing projected average annual revenue by approximately \$400K.
- Built automated data pipelines, analytical visualizations, and Excel VBA tools to streamline hydropower modeling, data processing, and operational reporting workflows.
- Presented monthly project revenue and performance analyses to 30+ cross-functional stakeholders, translating technical findings into actionable insights and consistently delivering analyses under strict deadlines.

EDUCATION

Bachelor of Science, Civil Engineering

University of California, Davis • Davis, CA • 2020

SKILLS

Languages: Python, TypeScript/JavaScript, Go, SQL

Frontend: React, HTML5, CSS3/SCSS, Angular

Backend: Flask, FastAPI, REST APIs, SQLAlchemy, Node.js (TypeORM), Celery

Databases & Infrastructure: PostgreSQL, SQL Server/T-SQL, Redis, Docker, CI/CD (Jenkins, Rundeck)

Identity & Security: Keycloak, SAML 2.0, OIDC/OAuth 2.1, JWT, RBAC

Tools & Testing: Git, pytest, JUnit, Swagger/OpenAPI, Agile/Scrum, Jira/Confluence, Claude Code, Cursor
